

ABSTRACT

A cabin crew area (10) of an aircraft (14) includes an aft area (16) with multiple galley carts (30). The aft area (16) has a fore/aft depth that is approximately equal to the depth of two or more of the galley carts (30). A galley storage unit (32) resides in the aft area (16) and stores the galley carts (30). The galley storage unit (32) is configured for placement of a portion of the galley carts (30) in a lateral row in a forward section (42) of the aft area (16). A main counter (34) resides over the galley storage unit (32) and extends laterally across a galley-servicing area (12) of the aircraft (14).
